

Fundamental British Values in Geography

<p>Individual liberty</p> 	<p>Individual liberty is taught and encouraged by teaching students about the environment and how they can make a difference in protecting our world. Through completing fieldwork activities students can see the effect that humans are having on our planet and can be empowered to make a change - even if they are standing away from the crowd</p>
<p>Mutual Respect</p> 	<p>Mutual respect is taught and given when students are expressing their opinions and beliefs about different geographical parts of the world and societies in them. Students are taught and encouraged to show respect to each other's beliefs, feelings and opinions by giving each student a forum to share these on with the expectation that these must be listened to. Students will discuss what it means to be British and learn how to question and challenge stereotypes</p>
<p>Democracy</p> 	<p>Themes where development is compared to political systems run throughout the Human Geography sections of the curriculum. Corruption and the role it plays in the quality of life and the standard of living as well as the political system in a country, is fundamental in understanding the level of development.</p>
<p>Freedom of faiths and beliefs</p> 	<p>In Geography we teach students that people belong to many different faiths and that we respect the faiths of those around us <i>(we draw on examples from across the world in our studies, including amongst others Japan, China, Nigeria, Bangladesh, Russia, South Africa, Iceland)</i></p>
<p>The rule of law</p> 	<p>In the topic, Changing Urban Environments, students learn about the causes and consequences social disharmony and poverty issues cause, appreciating how this can influence certain areas in their political stance . Also the evaluation of the success of development projects and urban regeneration schemes allows students to appreciate the ethical issues of race assimilation and segregation .</p>
